|                       |                                                                                                    |
|-----------------------|----------------------------------------------------------------------------------------------------|
| Konstrukční provedení | Střední tlak Zásuvné šroubení s O-kroužkem a přídržnou kleštinou pro připojení polyamidových hadic |
| Připojení             | R1/8" ... R1/4" podle ISO7/1 nebo M6x1...M10x1 podle UNI 7707                                      |
| Vnější průměr hadice  | 4...8mm                                                                                            |
| Materiály hadic       | Polyamid                                                                                           |
| Tolerance trubek      | ± 0,07mm                                                                                           |
| Materiály             | Těleso Mosaz CW617N poniklovaný, Upínací kleština Mosaz CW614N, Těsnění NBR                        |
| Použití               | Centrální mazací systémy                                                                           |
| Teplota média         | -20...+80°C                                                                                        |
| Provozní tlak         | max. 80bar, v závislosti na maximálním tlaku použité trubky                                        |
